

Major Studio 1

MOHINI DUTTA

LEGEND

-  : Assignments & Homework
-  : Storyboarding / Brainstorming
-  : Artist / Designer to look up
-  : Events & prospects to explore

27 Aug 2018

- **Setup a blog website** — use any medium
 - ↳ Wordpress, Medium, Tumblr, etc.
 - ↳ Write summary of reading assignment on the blog
 - ↳ Document every class on a blog
- Deadline
Aug 29, 2018

◦ **Total Projects** this fall

- ① → 5-in-5 : 1 project every day for 5 days
- ② → Ideas in form : show one idea in diff^t ways
- ③ → Instruction Sets for Strangers : create sth for strangers & interact with them
- ④ → Final project : create a project from the above 3 activities & write a paper

- Note : When you do research — talk about the info. you found useful from that reference. Don't just share a link of the reference.

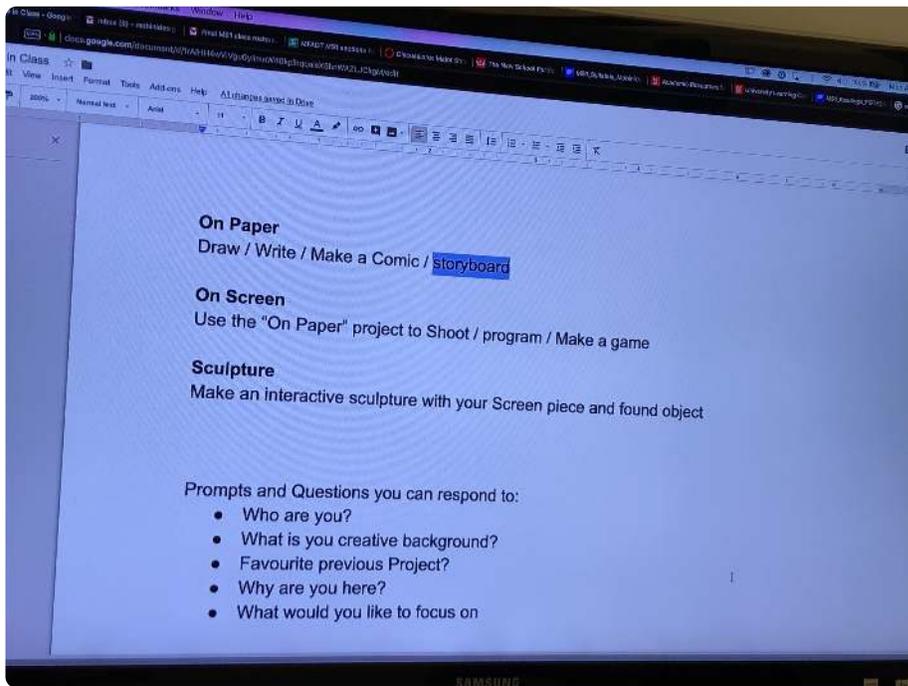

◦ A few criteria for evaluation

- ↳ NOT looking for a finished product. If you are trying sth out, proof of concept works.
 - ↳ a part of the entire project, but properly finished
 - ↳ Are you able to present what you have done?
 - ↳ Are you thinking critically (deeply) about your project?
(It is not just about creating things. Critical thinking is imp.)
-

§ About You

- ① On Paper → *main things about yourself*
 - ↳ write a comic / storyboard - Concept
- ② On Screen
 - ↳ Shoot a video of that using your phone
- ③ Sculpture
 - ↳ Make an interactive sculpture out of it

Idea: Communicate yourself in 3 diff^t ways.

I want to show that I like to help, so, I create a story of my friend having a doubt & I clear it.

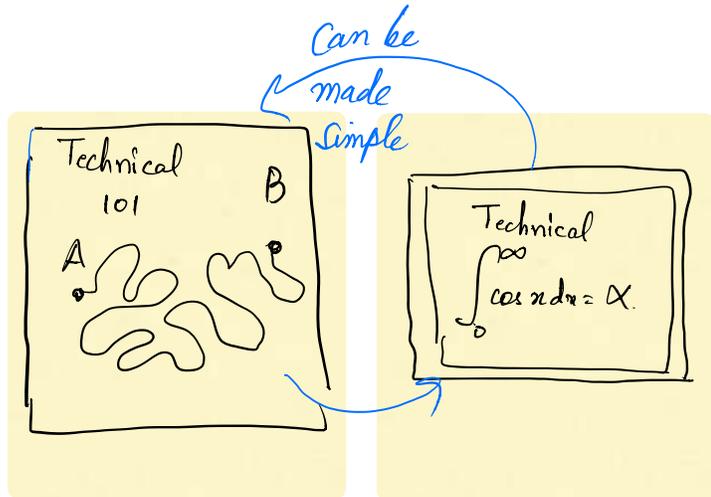

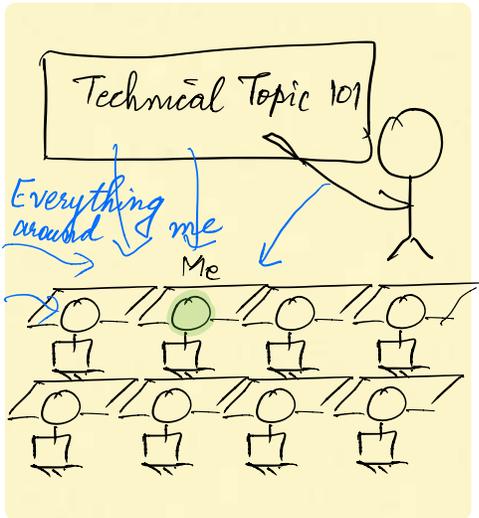

On Paper: Create a story of yourself helping out others.

Idea: I like to simplify things & objects around me. I have my way of simplifying the complexity. So, I like to share my understanding of simplicity.

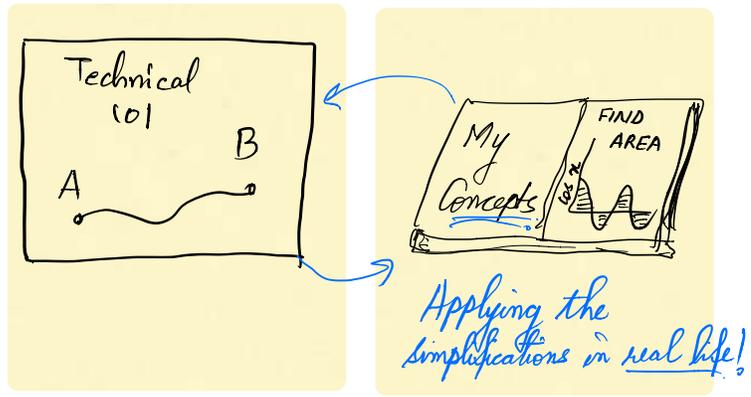

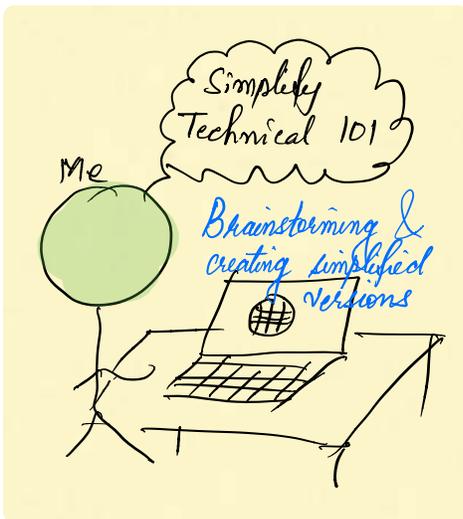

In education: I simplify a technical subject by putting it in my own words.

ABOUT ME : I like to learn & SIMPLIFY

LEARN

SIMPLIFY

29 Aug 2018

o Present^{on} on About Us.

§ 5 IN 5

- Make 5 projects in 5 days
- Think of design as a daily RITUAL
- Select your constraint (the rules within which you work):
 - → A form - analog, video, game,
 - → A content - financial sys, ecology, themes, topics
 - → A context - who is it for, how does it fit
 - → A time of day - b/w 9am & 10pm, only sunrise
 - → A place - house, subway, country,
- Stick to the constraint you choose & make 5 projects
 - ↳ 1 project each day.
 - eg: 1 processing game per day, 1 website per day
- Post about it every midnight

Select a content
& represent it in
diff^t forms.

I want to select
a difficult topic
& try to simplify
it in diff^t forms

Create sth for 5
diff^t age groups

o Set a value of excellence for yourself & try to meet it.

① Pick a difficult topic you don't know. : eg. Bitcoin, Blockchain, Sex

② Divide the 5 age groups you want to explain it to.

③ Create content for every age group. Based on their experiences (not their concerns)

④ Understand what form/medium would work best for that age group.

*⑤ Make the age group (consumer) understand the topic : User Test

⑥ Document the project & post it on a blog.

o Project starts tomorrow (Thu, Aug 30, 2018)

5 Sept. 2018

MSL OBJECTIVE

↳ Melanie Green & John Sharp.

Goals

- ↳ Research domains : find
- ↳ Point of view : convey
- ↳ Concept driven work
- ↳ Iterative process : refine

Ideas in form : Next project

- ↳ Exploring an idea through diff^t forms
- ↳ Seeing a project through diff^t scales
- ↳ 1D, 2D, 3D, 4D, 5D

Instruction Sets for Strangers

- ↳ have an idea & put it in public
- ↳ things may happen which may not be successful
- ↳ it's fine.

§ Mid-term

- ↳ Talk about what you've done so far
- ↳ Talk what you want to do for finals
- ↳ More of an advisory session

§ Final Project

- ↳ What would you make in the skills you currently have?
- ↳ D4TC manifesto : creator's statement of intent
 - ↳ why you're making what you're making
- ↳ Process
 - ↳ Make prototype first, then, design statement.
- ↳ Evaluation criteria

Same for MS2, Thesis 1

Thesis 2 ...

- ↳ Concept : Innovⁿ
- ↳ Communicⁿ : How well expressed
- ↳ Creative Process : Method - like research, prototyping
- ↳ Context : Relate work wot to others working in that space : research
- ↳ Tools & Methods : Use in new & creative ways

5 Sept. 2018

* The first semester is to teach you how you set your constraints.
↳ what is the level of work you find interesting?

§ COMMENTS ON 5-IN-5

- Work on audio quality for videos
- Do user research using design principles
 - ↳ what form/media works for them
 - ↳ choice of media can be worked on
 - ↳ newspapers for elderly? research paper for graduates?

12 Sept. 2018

Playing game/activity : **Exquisite Corpse**

↳ Make a text document by combining elements written by everyone

↳ followed by the reading on Oulipo

↳ Fluxus : American version of Oulipo

↳ Idea : Surrealism.

★ Check the Special Collection at Parsons
↳ eg : Biggest collection of antique faleric

17 Sept. 2018

Feedback :

- ↳ ① loved 😊
- ↳ ② liked 😊
- ↳ ③ Needs more work 😊
- ↳ ④ Give a reference 😊

Technique from:
design collaboration

↳ Remotely give f/b
& collate in the end.

Deliverables for the project : Ideas in Form.

1D : Text (Story)

2D : Text + Visual : sketch of your idea

3D : Physical prototypes & build the experience

4D : Video Tutorial / Animation of the project

5D : Make it interactive — user uses themselves

→ Create a class design document & share resources on Google Drive — build a document

TEAM 1 DEXTER & DID I

I don't think a dentist is a valuable customer for this

Love the story of a computer & a person

Good PROFILE

Love the Visual Design

I like the Subject of Climate Change

Very imp. to take initiatives to deal with this

Is this chip insert in body?? I'm not sure.

I really think about the kind of product before, but never enough to win

Explaining warning as global warming, not a feeling, not so special

Good Job!

Passion about your topic (Gives energy)

Loved: Love the connect of "warning" and "Smart" And the context

Amazing concept... Room 11

LOVE THE IDEA OF RECORDING PAST ACTS. WE COULD DO SOMETHING WITH THAT

GOOD STRUCTURE!

One factor talking about the collection of data

WIRELESS SENSOR DATA GENERATION CONVENTS HARDLY & TOWARDS GLOBAL NETWORK

★ READ: THE ENVIRONMENT IS NOT A SYSTEM - TECH DRIVEN

WHAT ARE THE LIMITS OF DATA DRIVEN SOLUTIONS

Be sure to think of the ethics this device may cause.

Making a chip sound like a technological thing

Play the DEVS EX Games

CAN WE SOLVE SOME THING SO COMPLEX

Should environmental protection future as our humanity

What's the ethical challenge of this device

I think... and... to the people

Comments on ID

- ↳ Think about cybernetics & transcendence
- ↳ Waffa Bilal — NYU
 - ↳ Camera embedded in skull — take pictures
 - ↳ Iraqi refugee
- ↳ An artist — colorblind
 - ↳ antenna embedded in his head to see colors
 - ↳ Ask Sven
- ↳ Think about people choosing to augment themselves
- ↳ Build a reason of making it voluntary/mandatory
- ↳ Learn from environment to be more holistic
- ↳ Look up — bio concrete — ... speculative design concepts
- ↳ Think about making it relevant to the individual

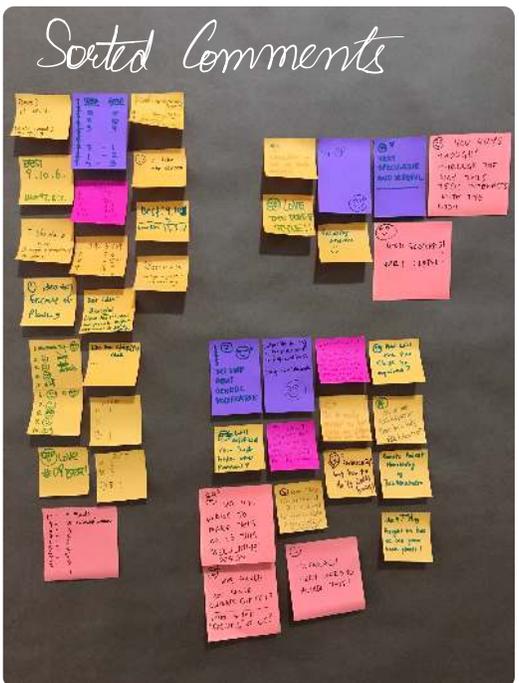

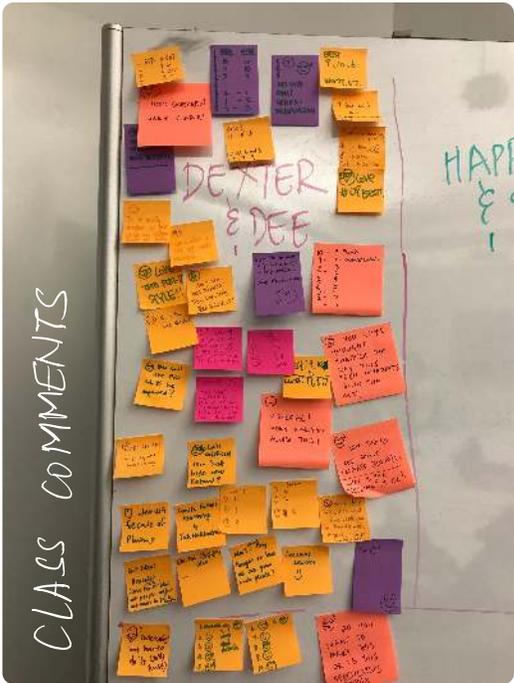

17 Sept. 2018

- ① Take best 3 & see how audience engages in it
↳ only sketches
↳ make a sequence
- ② Bring prototyping material

* The 3 ideas we like :

- #2 : Bracelet
- #11 : Artificial rain
- #9 : Artificial plant

§ Idea ranking by vote

#① picoDetect brain chip	0	x	✓	x	x	✓	✓	x	x	✓
#② Object detect bracelet	0	✓	x							
#③ Moist detect ring	0	✓	✓	✓						
#④ Current detect watch	0	✓	x	x	x					
#⑤ Moist detect foot ring	0	x	x	x	✓	x	✓			
#⑥ Shiver detect foot	0	✓	x	✓	✓	✓				
#⑦ DNA gene editing	0	x	x	x	x	x	x	x	✓	
#⑧ AR Glasses	0	✓	✓	✓	✓	✓	✓			
#⑨ Artificial plant grow	0	x	✓	✓	✓	✓	x	x	✓	✓
#⑩ Bacteria culture	0	✓	✓	x	✓	✓	✓	✓	x	
#⑪ Artificial rain	0	✓	✓	✓	x	x	x	x		

§ Our final top 3 ideas :

#2 , #9 , #11

◦ Bracelet

- ↳ Think of the world where this is needed
- ↳ It's not a smart watch.

✦ Combine 4D & 5D

- ↳ Get someone to test it & record that
- ↳ Create a product video: add world scenario.

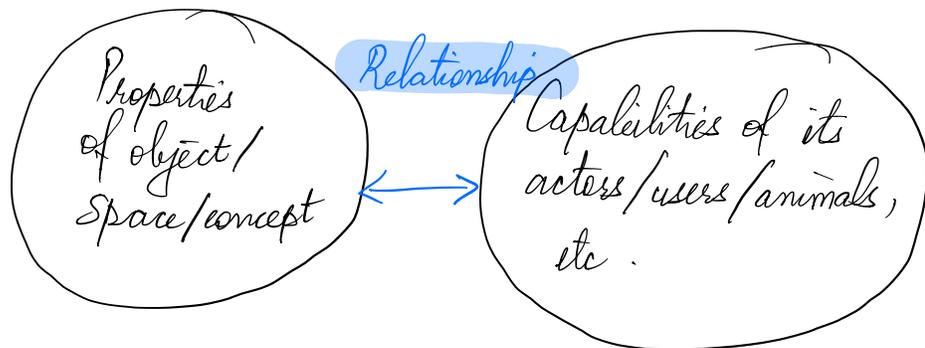

Think about : [NEXT PROJECT]

- A space you want to explore & an emotion/experience you want people to experience more.

08 Oct. 2018

★ Affordance : Rel^m b/w properties of an object & capabilities of its actors .

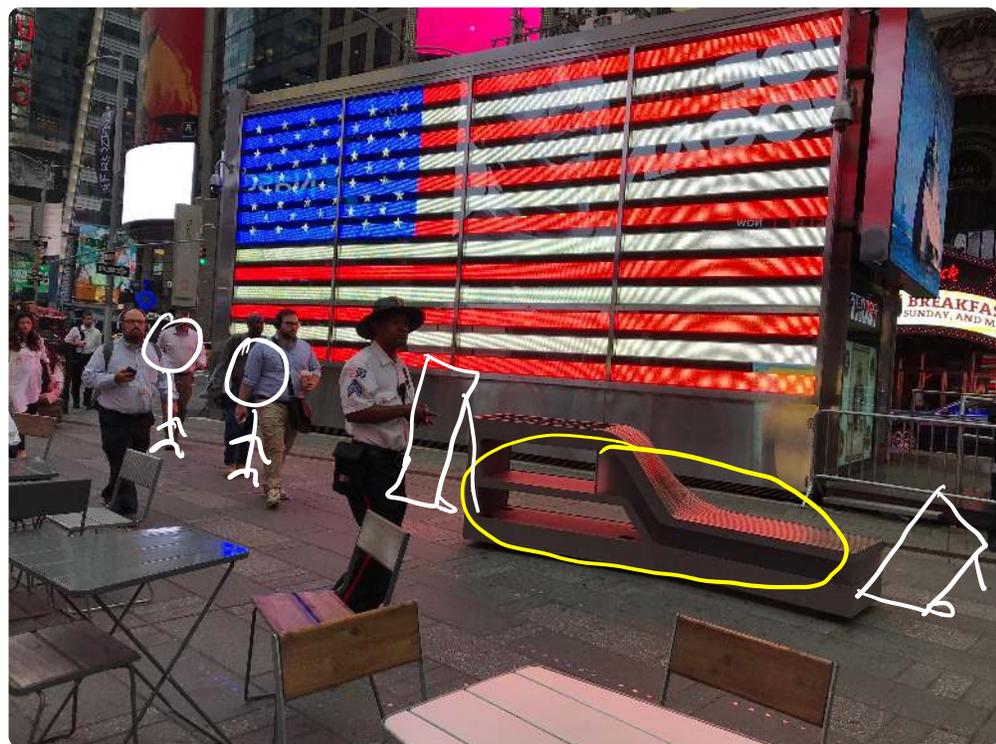

§ Instruction sets for strangers

↳ what we are trying to do :

↳ Make Affordances more DISCERNIBLE

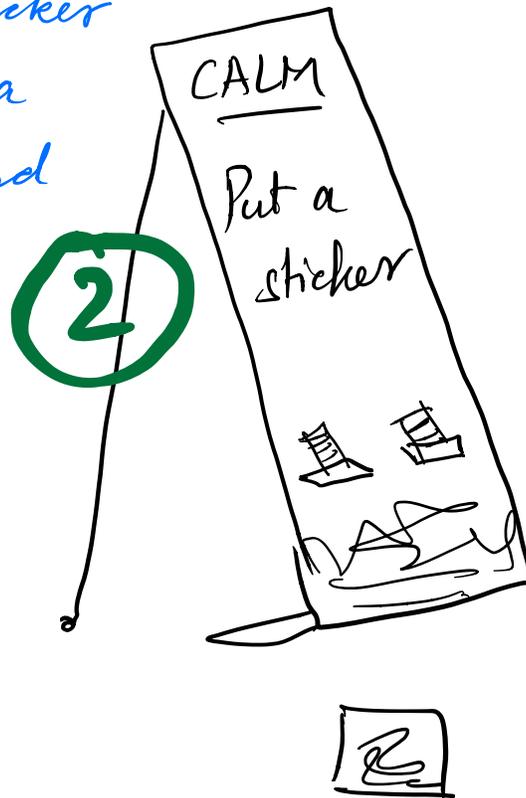

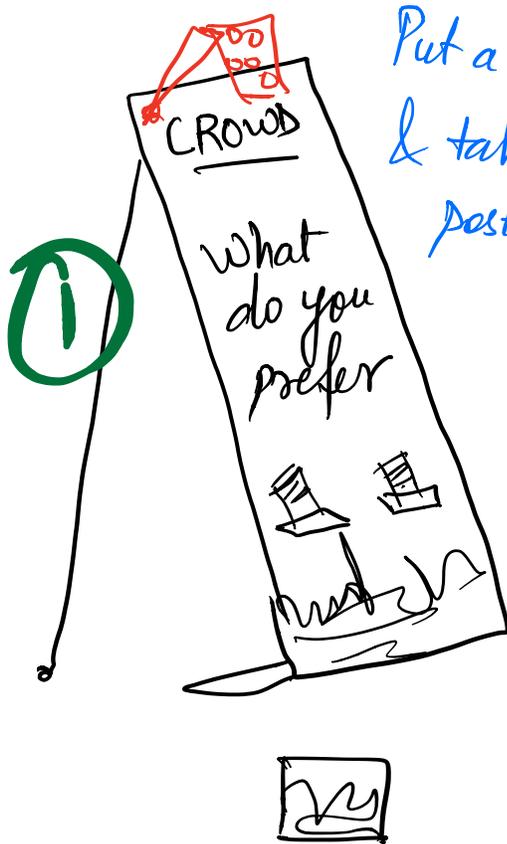

◦ Signifier : states sth has a specific use. It is related to Discernibility.

Goal : W/o using words

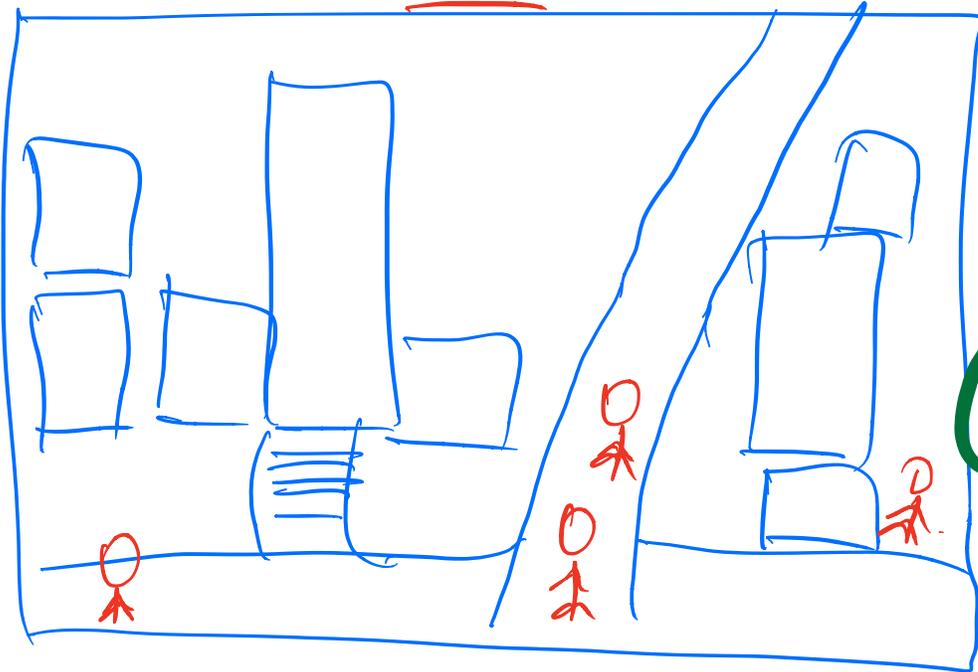

Standee

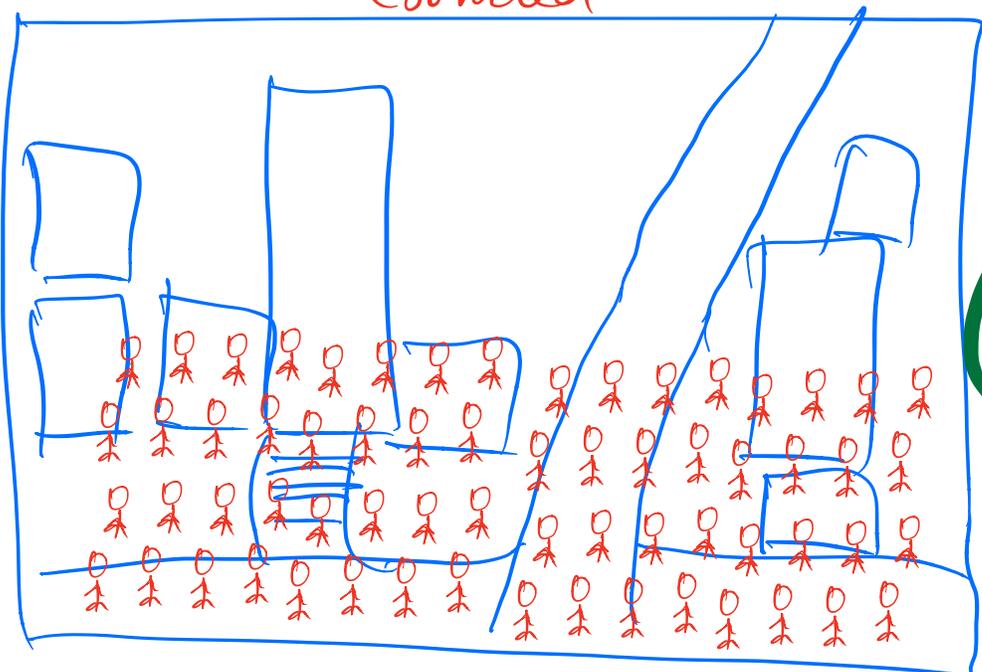

Calm

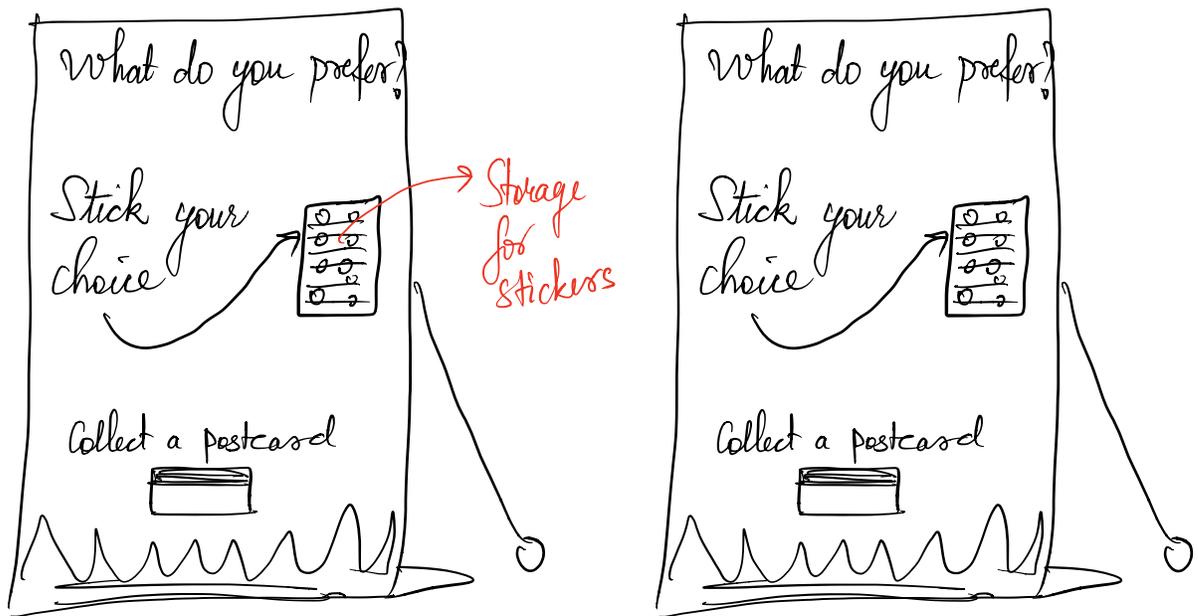

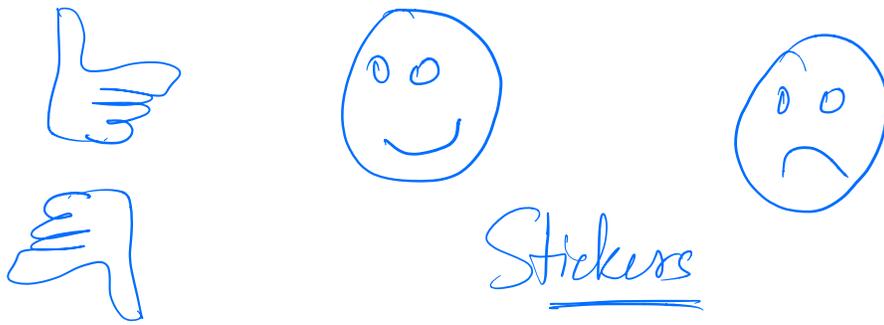

2

Crowded

1

Target audience → 50 stickers per board.
(50-100 people)
votes

Timelines (Sat/Sun)

- ① Prepare illustrations
- ② Prepare standees
- ③ Prepare postcards
- ④ Buy stickers
- ⑤ Create a design for standees

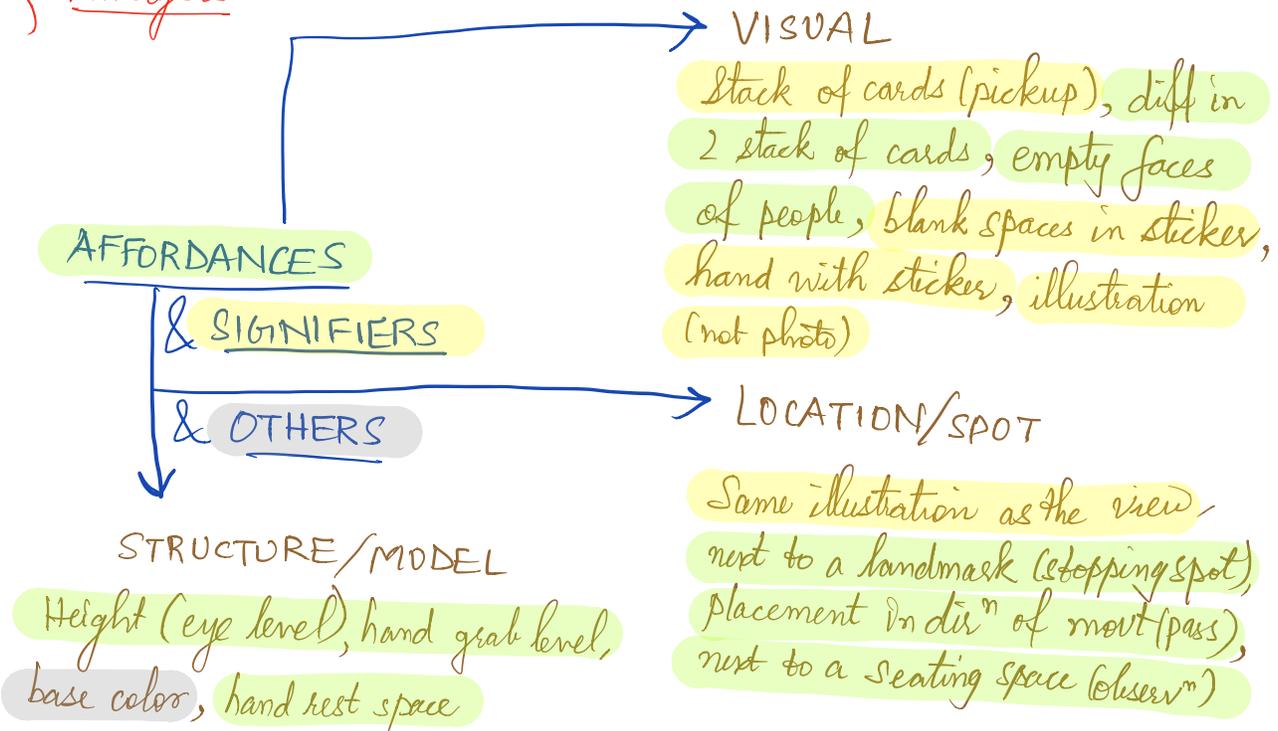

Design Statement

① Vibe with TS — understand

② Preference collection — crowded vs uncrowded

Postcards	Stick
X 29	X 3
✓ 19	✓ 11

② Analysis

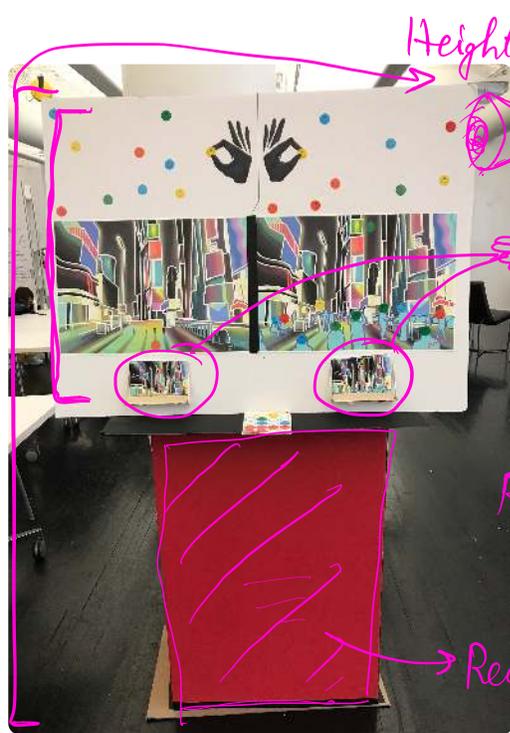

① If you can pickup, pickup calm ⇒ objective achieved

② If something is incomplete, complete it

① More pickup of calm postcards: Affordance of stack difference

② More pasting of crowded stamps: Signifier of blank faces

Height => eye level

Hand level

Podium felt

put hands on it

Red

flashy attracts

Result

Diff. in stack count => They are being taken

Stack => more than 1 => Take it

2 comparative views from the same spot => comparison

hand symbol with stickers => Take out a sticker

Blank spaces => Put stickers

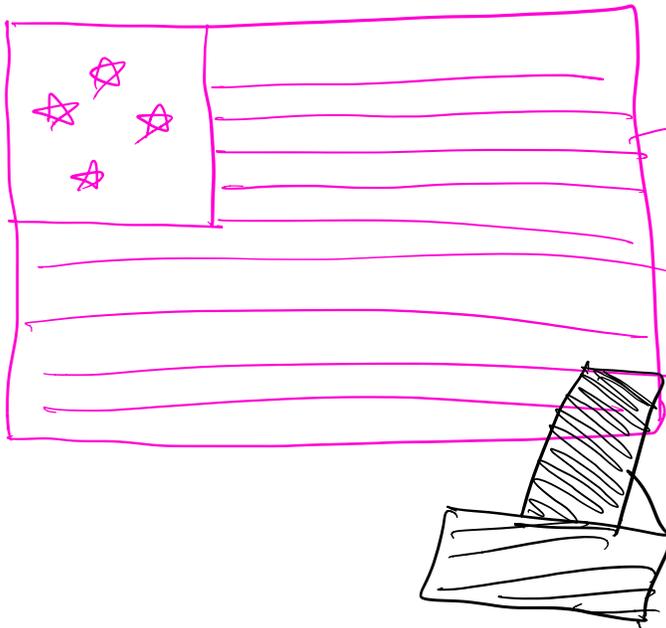

Unexpected affordance

Empty faces with stickers alongside
=> put faces on them

Illustration (not actual photo) => Art piece

Installation in front of a landmark
=> Stop there & observe

10 Oct. 2018

§ Current Due : Instruction Sets for Strangers

- ↳ ① Presentation on Mon
- ↳ ② Whole project presentⁿ on Wed.

Detail ↘

Presentation details for Instruction Sets:

After this class, you must test your main idea, iterate on it at least once, and present that in class Monday.
Monday we will get feedback from the class, if any additional iterations are required, then do that, and present the whole project on Wednesday.

Presentations next week:

2 Teams will go give presentations and get critique from Few Liu's class.
We will have 2-3 of their teams in our class presenting their work.

§ MID-TERM PRESENTATION : Oct 22, 2018.

① Tell a story of your design journey through the 1st 1/2 of a semester (in MAS1).

- ↳ Connect what you have learned & what you did
 - ↳ Best & worst things about a project
- ↳ Build a story for the critics

- ↳ How did the projects you did relate to you?
 - ↳ Bring everything you have done in 1 narrative.

② High level concept/domain of interest for finals.

§ Comments on MSI Midterm

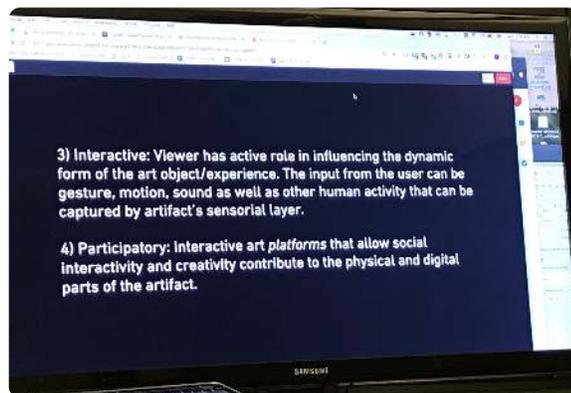

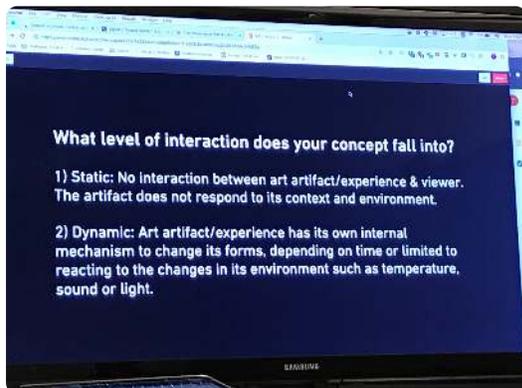

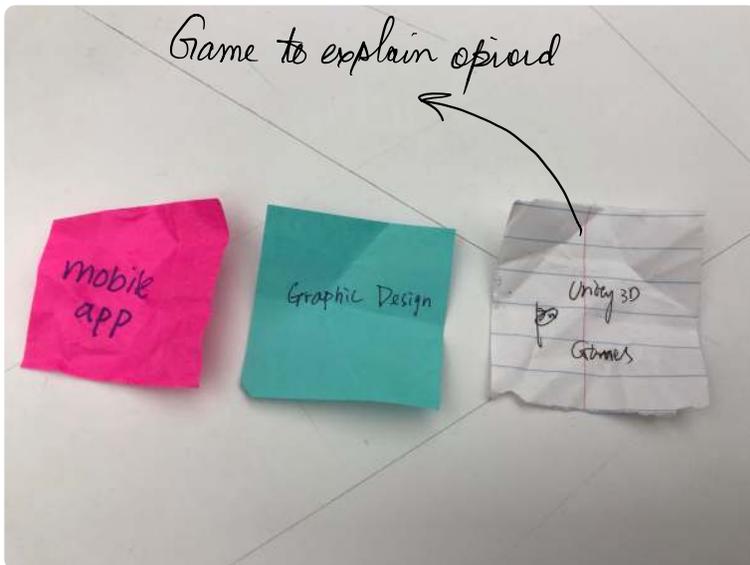

- Misplaced labor — don't be too invested in your design such that you make the prototype look too good. Prototypes require iteration.
- Know your audience — show work to the audience so that they understand the context of your creation (eg. Nuomeng's bootcamp project on Chinese characters — Asians would probably relate, Americans may not)
- Narrow down your goal — You are not hindered by reality, you are hindered by your technical skills
— Don't be too broad.
- Context is imp — People judge a presentation by what we tell them. So, show your work.
- OK, now I know a thing — make a data viz project impactful enough so that people remember.

- Create a piece from your presentation — change the style & what you do in your presentation becomes a piece. (eg: Michael's storytelling)
- Me : **EDUCATION & COMMUNICATION** : That's your interest area. Focus on that & build on it.
- Words are dangerous — use words carefully. Words like empathy & emotion are good, but the thought behind the use of such words should be clear.
- When you don't find a door, build one
 - when you are thinking about a dirⁿ you want to take & you cannot find a reference, create a reference, write a book, etc
- Talk about your failures — as designers, we fail. So, it's important to think about the projects that don't work.

24 Oct. 2018

Brainstorming

↳ Using your precedents

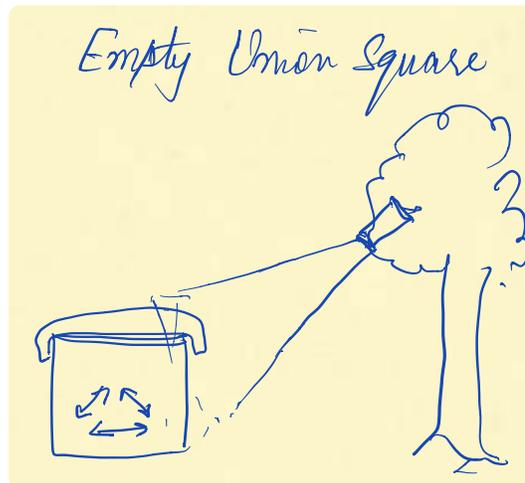

Adam : Projection Mapping on a garbage
or video game

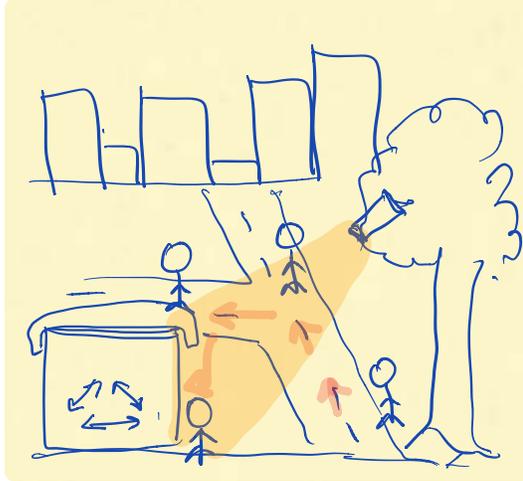

① STATIC

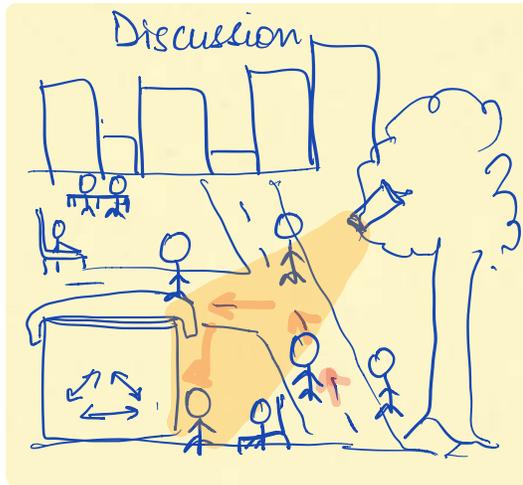

② DYNAMIC

③ INTERACTIVE

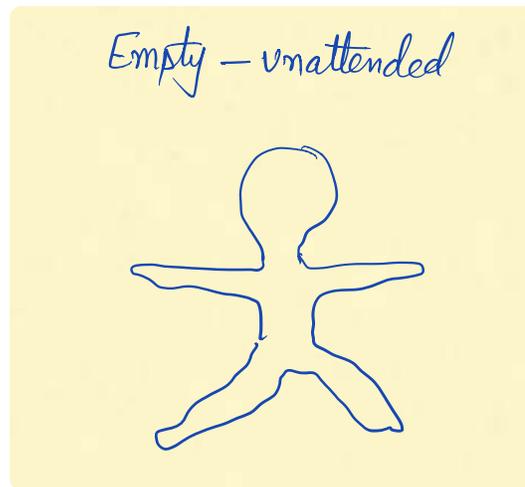

④ PARTICIPATORY

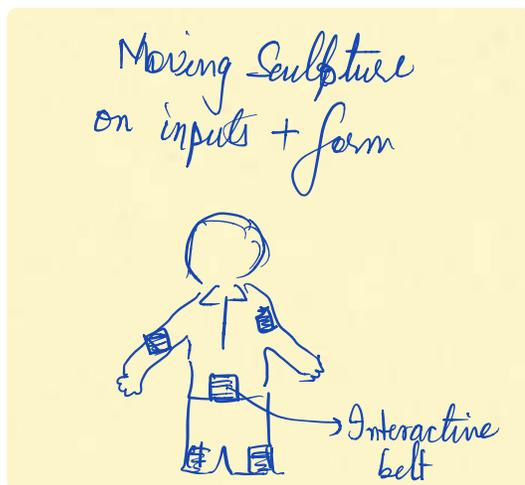

§ Yugi : Sculpture with interaction

① STATIC

② DYNAMIC

③ INTERACTIVE

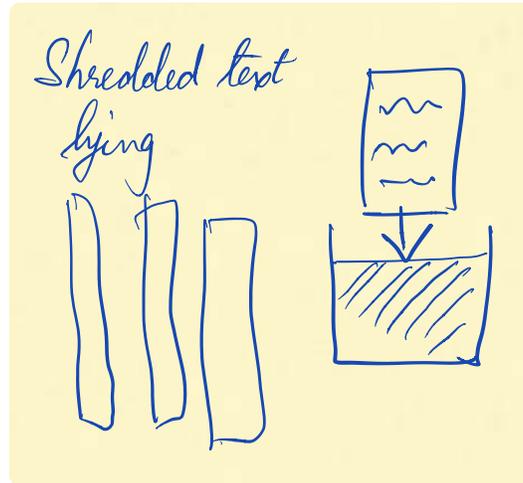

④ PARTICIPATORY

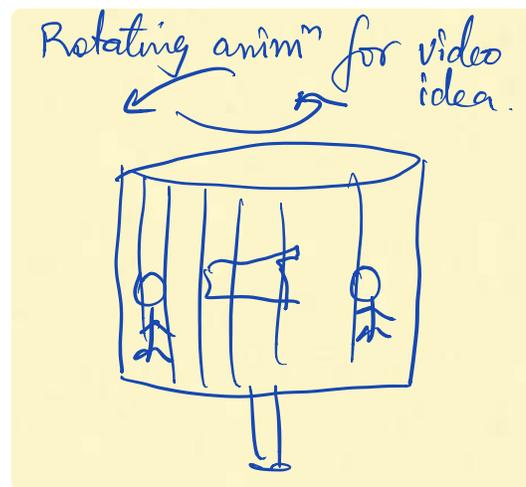

Waverly - Queer game → animation

① STATIC

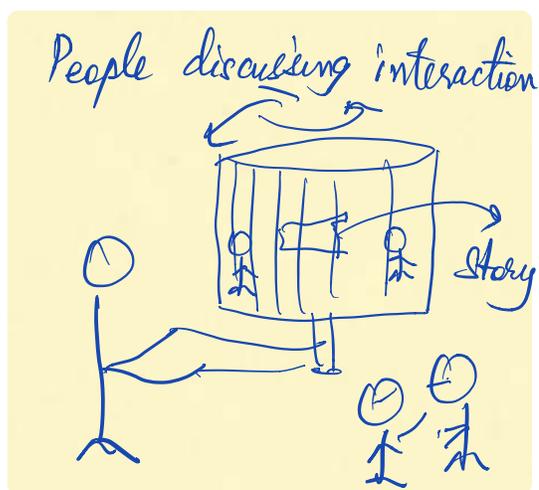

② DYNAMIC

③ INTERACTIVE

④ PARTICIPATORY

31 Oct. 2018

My thoughts on the readings/ movie viewings

1. Daisies

- A. Show passing time through different colour overlays
- B. The scenes have contrasting emotions. The supporting characters are shown and their emotion is felt. Then, the main characters tweak the scene. Finally, the scene ends with an interplay between the contrasting emotions of the two characters (main and supporting).
- C. Mean, hungry and broke girls playing around with the emotions of men, trying to sustain lives
- D. Scene 1: A man cheated by 2 girls, one of them pretended to be on a date, when the other one barged in
- E. Scene 2: The main dance in a restaurant gets taken over by a random act by the 2 girls
- F. Scene 3: focus on music for transitions, and scene syncing with the act

o Anatomy of an AI system : anatomyof.ai
↳ Kate Crawford & Vladan Joler

§ CRITIQUING FEI'S CLASS PROJECT IDEAS

- ① Cassandra : Queerness - Textile - Computation
 - ↳ Rel^m b/w materiality & queerness
 - ↳ weaving → diff^t forms → static electricity
 - ↳ changing weaving patterns → circuits

② Adam : Unsanctioned Public Art

↳ Art that is left out — unrepresented

- What form of art do you want people to realize?
- Think about it in terms of disconnectivity from phones

③ Elena : Queering the binary

④

Digital tomb — tomb sweeping (holiday)

↳ Digital storytelling
↳ Preserving memories

You probably never know about your mom's first crush, the first jazz club in South City, or the first time she met your grandpa's best friend in the parking lot.

StoryWards makes it easy and fun for family members to share a piece of their lives, with weekly digital stories, so you can keep your loved ones' lives close to you.

05 Nov. 2018

- Concept of **PIVOT** in a startup
 - ↳ Used differently from its actual purpose
 - ↳ eg: Unity started as a video game - went terrible
 - ↳ So, they changed their model of creating a framework where people can play games.
 - Co-design
 - ↳ When you don't design the whole product, but just diff^t parts of it.
 - Designer should be adaptive to change
 - ↳ ∴ a lot of our work is in the conceptual phase
 - ⇒ Iterate it with people
 - & Start fixing it early.
- So, for finals, keep taking f/b & iterating your work.

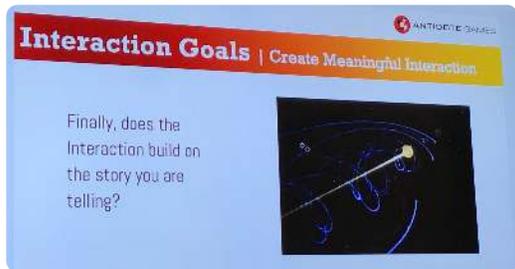

* Hannah Arendt

↳ Writer, philosopher

↳ Quote: Storytelling reveals meaning w/o committing the error of defining it.

good stories are those which don't have a structure/interpretation

- Singapore is working in making games around systems & topics
- Concept of Easter Eggs in a game.
 - ↳ parts of a game that you hide intentionally to challenge the players.
- A design process is a group of LEGO bricks ∴ it opens the world of possibilities & interpretation.

Comments on PPT

- Think about your audience - how do you want the people to feel?
 - ↳ If you do it for kids, will they have enough say in the medicine they take?

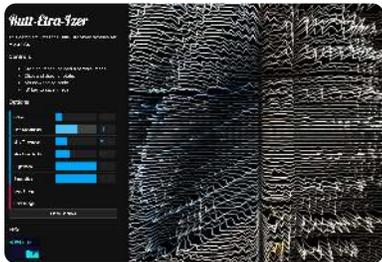

12 Nov. 2018

MSI Final Concept Feedback

↳ by Haitham Emame, Mohini Dutta & Benjamin Nerskov

- Nociception → neurological term → no nociception
(or Nocioception) +
pain exists
- Target locⁿ → Museum
↳ VR expensive → display based install^m
- Next step → create view → sketches
↳ Top down & other angles
- Think about: Look-like setup when people are waiting
in line
↳ eg: screen showing how to use

* Rutil Etia: machine → reference for CRT monitor project

↳ by Haitham Emass, Mohini Dutta & Benjamin Nowkov

Think

- Why are we doing the project?
- Objective: Educational Guided Experience
 - ↳ Explain basic human fn.
- VR experience - narration
- What part of the body I'm in? → (map)
- How does the user know where to interact?
 - ↳ Give visual cues
- Explain imp before pill taking
- Break the process in series of interactions
 - ↳ ①: Pin striking the person
 - ↳ ②: Zoom to reveal the fatty acid
 - ↳ ③: Switch the view to the stomach with pill getting in.

Title

◦ Entrance into the body

↳ Skin, stomach, nerve, ---

o Previous comments by the class

↳ Think about the mechanics & interaction in addition to the narrative

↳ Think about : how the players would feel when they play the game.

↳ Answer this : why does this project matter to me?

↳ Watch the films : Fantastic Voyage (1966) for inspir^{ion}.

o Osmosis Jones

o Cells at Work

14 Nov. 2018

o As designers, whenever you do a survey, don't ask leading questions.

↳ eg: If I like the color blue, I ask the question: do you like the color blue?

↳ If \exists leading questions, people can't give true opinions.

o Feedback on project idea:

- Create a single scene interaction instead of multiple ones
↳ make yourself as the pill & the pain in front of you. So, create an interaction of the user trying to figure out where to add medicine to reduce pain.

- Think about the physical interaction when a player steps-in to a VR space

↳ ① A physical structure (cardboard) of a person in pain & you see that to step in VR

↳ ② Updating the VR glasses to be a person's mouth & you are the pill. So, as you put on the headset, you begin interaction inside the body - A VR headset installed inside a mouth or something.

03 Dec. 2018

* Diff. b/w Commodity & Community

- Commodity : sth that we can take value from .
- Resource : sth that's openly there & may not have that value system .
- Community : Group of people coming together based on common values.

* NO SPACE BELONGS TO YOU UNLESS YOU OWN IT.

- eg. FB, Twitter, Tumblr
- So, if they remove your profile one day, you can't do anything about it.
- Technology has that influence
- So, when you create tech products or sth. around a community, make it such that these roadblocks are not there. People with values should not get a pushback.

END OF COURSE
